

SERVICE MANUAL

Repair Kit KK-5007

DEVILBISS[®]

■ TLC-555 & TGC-545 DRIP FREE SUCTION CUPS

Important: Before using this equipment, read all safety precautions and instructions. Keep for future use.

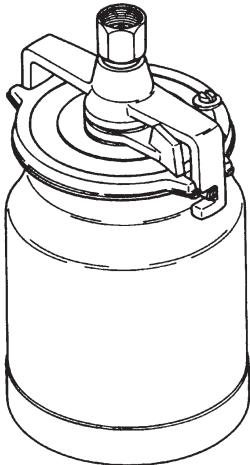

Figure 1

DESCRIPTION

Models: ■ TLC-555 – One quart capacity,
Non-stick coating lined cup
TGC-545 – One quart capacity

These drip free suction cups have a unique, two position valve which permits selection of either a drip free spraying mode or a conventional open vent mode.

In the drip free position, air is directed through the vent in the lid to a channel beneath the lid gasket before entering the cup at the valve. This allows the cup to be tilted when full without dripping paint through the vent. The cup can also be inverted while spraying without leaking.

The open position isolates the channel and opens a direct vent into the cup.

The position of the valve is indicated by alignment of the hole in the valve slot with the marks cast on the lid. These positions are identified as "O" for vent open and "D/F" for Drip Free.

Note

Non-stick Coating Lined Cup - Only use a wooden or plastic paddle or mixer for mixing material in the cup (7). A metal paddle or mixer can scratch the non-stick coating.

Note

For Non-stick Coating Lined Paint Cups, variation in the color of the non-stick coating is normal. This variation is the result of the normal production process used with this type of coating. We have selected this particular grade of non-stick coating because it provides **the best** overall performance and **maximum durability** possible.

OPERATION

Open Vent Mode "O" - To operate in the open vent mode, rotate the valve with a screwdriver or coin so that the hole in the valve slot is aligned with the "O" on the lid. See Figure 2.

If the valve slot hole should plug while operating in the "O" vent mode, use a pointed tool such as a nail or drill bit to probe through the valve slot hole to clear away the obstruction.

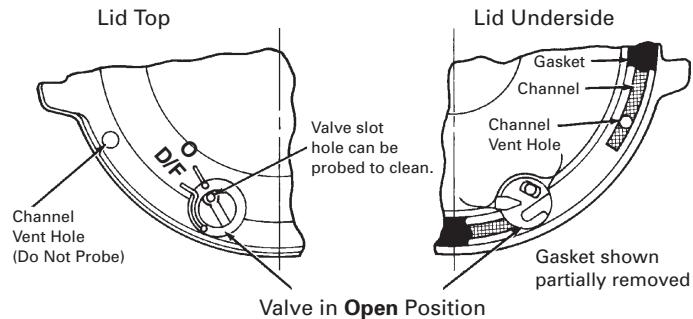

Figure 2 – Open Vent Mode

Drip Free Mode "D/F" - To operate in the drip free mode, rotate the valve with a screwdriver or coin so that the hole in the valve slot is aligned with the "D/F" on the lid. See Fig. 3

CAUTION

Do not probe through the channel vent hole at any time. Do not probe through the valve slot hole while the valve is in the "D/F" position. These holes are sealed by a gasket and gasket damage could result. See Figs. 2 & 3.

Valve Movement - Do not forcibly rotate the valve. If it will not move freely, soak in solvent or remove the lid assembly from the cup and press down on the top of the valve until it breaks free. The valve has free travel vertically of about 1/8". This can be used to push out the gasket.

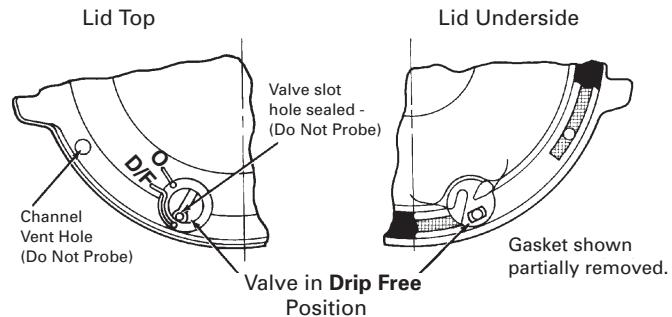

Figure 3 - Drip Free Model

■ Government NSN # 4940-01-208-8876 = TLC-555

SAFETY PRECAUTIONS

This manual contains important information that ALL users should know and understand BEFORE using the equipment. This information relates to USER SAFETY and PREVENTING EQUIPMENT PROBLEMS. To help you recognize this information, we use the following terms to draw your attention to certain equipment labels and portions of this manual. Pay special attention to any label or information that is highlighted by one of these terms:

WARNING

Important information to alert you to a situation that might cause injury or loss of life.

CAUTION

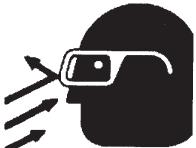

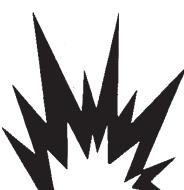

Important information that tells how to prevent damage to equipment

Note

Information that you should pay special attention to.

WARNING

**The following hazards may occur during the normal use of this equipment.
Please read the following chart.**

HAZARD	CAUSE	SAFEGUARDS
	Solvents and coatings can be highly flammable or combustible, especially when sprayed.	<p>Do not spray near open flames, pilot lights in stoves or heaters, or other heat sources.</p> <p>Adequate ventilation must always be provided. Industrial applications must comply with OSHA requirements.</p>
	During cleaning and flushing, solvents can be forcefully expelled from fluid and air passages. Some solvents can cause eye injury or irritation.	Wear eye protection.
	Chlorinated solvents, such as 1, 1, 1 - Trichloroethane and Methylene Chloride (sometimes called methyl chloride) can chemically react with the aluminum used in most spray equipment, and these cups, to produce an explosion hazard. The TLC-555, TGC-545 and TGC-536 are aluminum.	<ol style="list-style-type: none">1. Read the label or data sheet for the material you intend to spray.2. Do not use any type of spray coating material containing these solvents.3. Do not use these solvents for equipment cleaning or flushing.4. If in doubt as to whether a material is compatible, contact your material supplier.
	Certain materials may be harmful if inhaled, or if there is contact with the skin.	<p>Follow the requirements of the Material Safety Data Sheet supplied by your coating material manufacturer.</p> <p>Adequate exhaust must be provided to keep the air free of accumulations of toxic materials.</p> <p>Use a mask or respirator whenever there is a chance of inhaling sprayed materials. The mask must be compatible with the material being sprayed and its concentration. Equipment must be as prescribed by an industrial hygienist or safety expert, and be NIOSH approved.</p>

**CA PROP
65**

PROP 65 WARNING

WARNING: This product contains chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

INSTALLATION

1. Position yoke at right angle to gun body with vent hole in lid toward rear and lever of cam (3) toward front of gun.
2. Fasten cup lid assembly to gun by attaching nut (2), see Fig. 4, to fluid inlet nipple on gun. Tighten nut with wrench only until snug.
3. Strain material to be sprayed through a 60-90 mesh screen before pouring into cup.
4. Engage pins on cup into yoke and tighten yoke by moving lever of cam clockwise.

MAINTENANCE

Lid Repair/Replacement:

1. To replace a damaged part, use a 5/16" hex wrench to loosen and remove adapter (1), nut (2), yoke & cam (3). Lid and tube assembly are now loose for replacement.
2. Replace damaged parts on the lid and tube assembly. The cam lever should be located on opposite side of lid from valve (4).
3. Apply sealant (Loctite #262) to the first two full threads of adapter (1). Insert threaded end of adapter into open end of nut (2).
4. Install adapter (1) and nut (2) in top of lid and tube assembly. Use a 5/16" hex wrench to tighten firmly (10-12 foot pounds).

Valve and Lid Gasket Replacement:

1. To remove a damaged valve (4) or lid gasket (5), press on top of valve until it breaks free. The valve pushes the lid gasket from the seat. The lid gasket may now be removed from the lid. Continue pressing hard on the valve to remove it from the lid.
2. Install replacement valve (4) through bottom of lid so that the valve tab is toward center of lid. Snap in place. If necessary, use a plastic mallet or screwdriver handle to tap the valve in place. Press the lid gasket firmly in the lid using the end of a crescent wrench. Insert the side with the black marks first.

CLEANING

Note

Always clean the cam lever (3) surfaces with clean solvent and a brush. This will keep the cam lever functioning properly. Do not lubricate the cam.

General: For routine cleaning, it is not necessary to remove the lid gasket. It is not necessary or desirable to remove the valve for any cleaning procedure. The valve can be depressed from the outside to assist in removal of the gasket for gasket replacement or when cleaning dried paint from the channel. The valve should not be forced past the shoulder which retains it in the lid except for replacement.

Air Pressure: Always clean with reduced air pressure. An air pressure no greater than 15 to 20 psi will allow quick and thorough cleaning of the cup and gun and at the same time will:

1. Minimize the amount of solvent atomized into the air.
2. Prevent possibility of damage to cup from excessive back pressure.
3. Reduce the force with which solvent is expelled from the vent.

Cleaning Procedures:

1. Empty paint from cup and add small amount of clean solvent. The amount required will vary with different coatings and solvents.
2. Shake cup to wash down inside surfaces. Then spray solvent at low air pressure (15-20 psi) to flush out fluid passages.
3. Pour out solvent and add same amount of clean solvent.
- 4a. Again, shake cup. Loosen air cap. Hold a folded cloth over front of gun and invert cup over solvent receptacle. Trigger with short bursts to back flush vent channel. With valve in D/F position, solvent will be expelled with force from the channel vent hole in lid.

Alternative to Step 4a.

- 4b. Shut off air to gun. With valve in D/F position, invert cup over solvent receptacle. Trigger gun. Allow solvent to drip out channel vent hole in lid for several seconds, or until clean solvent is seen.

CAUTION

- Do not probe through the channel vent hole at any time. Do not probe through the valve slot hole while the valve is in the D/F position. These holes are sealed by gasket (5) and gasket damage could occur.
- Do not use abrasives such as a wire brush or steel wool to clean the inside of the non-stick coating lined cup (7). Damage to the non-stick surface could result.

IMMERSION

Since all materials in the cup are highly solvent resistant, the cup assembly may be immersed for cleaning. Immersion should not exceed 24 hours. The use of paint strippers should be avoided because strippers will affect the aluminum as well as other non-metallic components. If the lid gasket has become swollen from prolonged exposure to solvents, it will return to its original size without loss of properties when allowed to dry.

Parts List

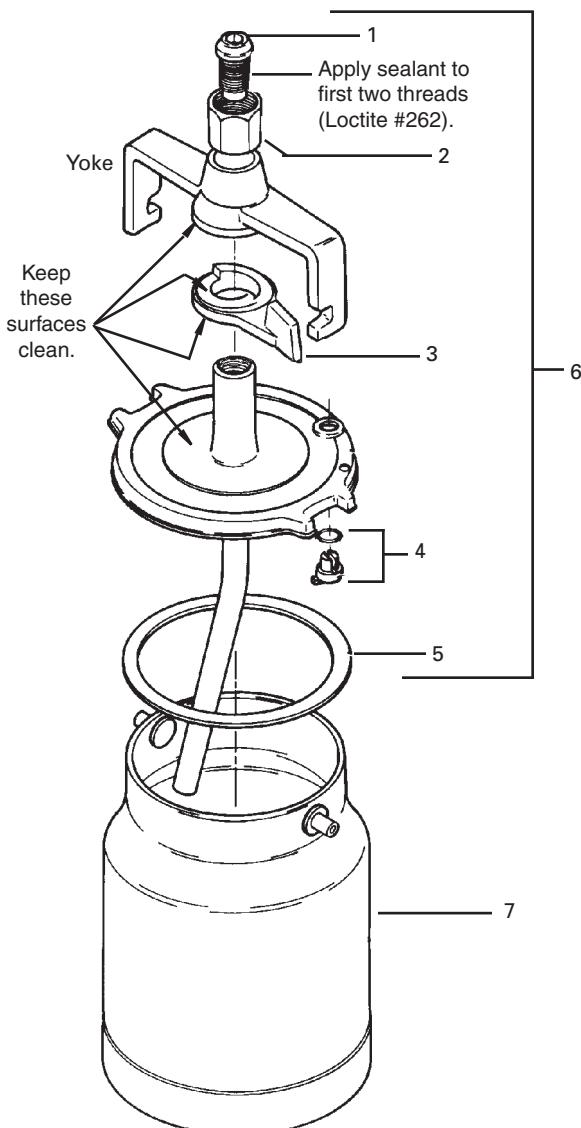

Ref. No.	Replacement Part No.	Description	Ind. Parts Req.
1*		Adapter, 1/2" NPS (M)	1
2*		Nut, 3/8" NPS (F)	1
3*		Cam	1
4*	TGC-407-1-K3	Drip Free Valve & Gasket (Kit of 3)	1
5*	TGC-9-K5	**Tri Seal® Lid Gasket (Kit of 5)	1
6	TGC-404	Lid Assembly (Quart)	1
7	KR-428-2	Suction Cup Assy. (Quart)	1
	TLC-401	Suction Cup Assy. (Non-stick, Quart)	1

* KK-5007 Repair Kit includes Ref. Nos. 1-5. Repair kit contains enough parts to repair one complete assembly.

Suffix -K3 designates a kit of multiple parts. Example: TGC-407-1-K3 is a kit of 3 drip free valves.

** Registered Trademark of Tri-Seal International.

NOTES

PRECAUCIONES DE SEGURIDAD

Este manual contiene información importante que TODOS los usuarios deben conocer y comprender ANTES de utilizar el equipo. Esta información se relaciona con la SEGURIDAD DEL USUARIO y CÓMO EVITAR PROBLEMAS CON LOS EQUIPOS. Para ayudarle a reconocer esta información, utilizamos los siguientes términos para llamar su atención a ciertas etiquetas de los equipos y partes de este manual. Preste atención especial a cualquier etiqueta o información que se destaque con uno de estos términos:

ADVERTENCIA

Información importante para alertarlo acerca de una situación que pueda ocasionar lesión o pérdida de la vida.

PRECAUCIÓN

Información importante que indica cómo prevenir daño al equipo

Nota

Información a la que debe prestar atención especial.

ADVERTENCIA

Durante el uso normal de este equipo pueden ocurrir las siguientes situaciones de peligro.
Sírvase leer la siguiente tabla.

PELIGRO	CAUSA	MEDIDAS PREVENTIVAS
	Los solventes y recubrimientos pueden ser altamente inflamables o combustibles, especialmente cuando se atomizan.	No atomice cerca de llamas descubiertas, luces piloto en cocinas o calentadores u otras fuentes de calor. Siempre debe haber ventilación adecuada. Las aplicaciones industriales deben cumplir con los requisitos de OSHA.
	Durante la limpieza y purga, los solventes pueden expulsarse con fuerza de los pasajes de fluido y aire. Algunos solventes pueden causar lesiones o irritación en los ojos.	Use gafas de protección.
	Los solventes clorados, tales como 1, 1 - Tricloroetano y cloruro de metileno (denominado algunas veces cloruro de metilo) pueden generar reacciones químicas con el aluminio utilizado en la mayoría de los equipos pulverizadores y estas tazas, ocasionando peligro de explosión. TLC-555, TGC-545 y TGC-536 son aluminio.	<ol style="list-style-type: none">Lea la etiqueta u hoja de seguridad para el material que piensa atomizar.No use ningún tipo de material de recubrimiento atomizado que contenga estos solventes.No use estos solventes para limpieza o purga del equipo.Si tiene dudas acerca de si un material es compatible, póngase en contacto con su proveedor de materiales.
	Ciertos materiales pueden ser dañinos si se inhalan o si tienen contacto con la piel.	Siga los requisitos de la Hoja de datos de seguridad (MSDS) suministrada por el fabricante del material de recubrimiento. Debe proveerse de un escape adecuado para mantener el aire libre de acumulaciones de vapores tóxicos. Use una máscara o respirador siempre que haya riesgo de inhalar materiales atomizados. La máscara debe ser compatible con el material que se atomiza y su concentración. El equipo debe ser como el recomendado por un higienista industrial o experto en seguridad y aprobado por NIOSH.

ADVERTENCIA PROP 65

ADVERTENCIA: Este producto contiene sustancias químicas que según información en poder del estado de California producen cáncer, defectos de nacimiento y otros daños al sistema reproductor.

Lista de piezas

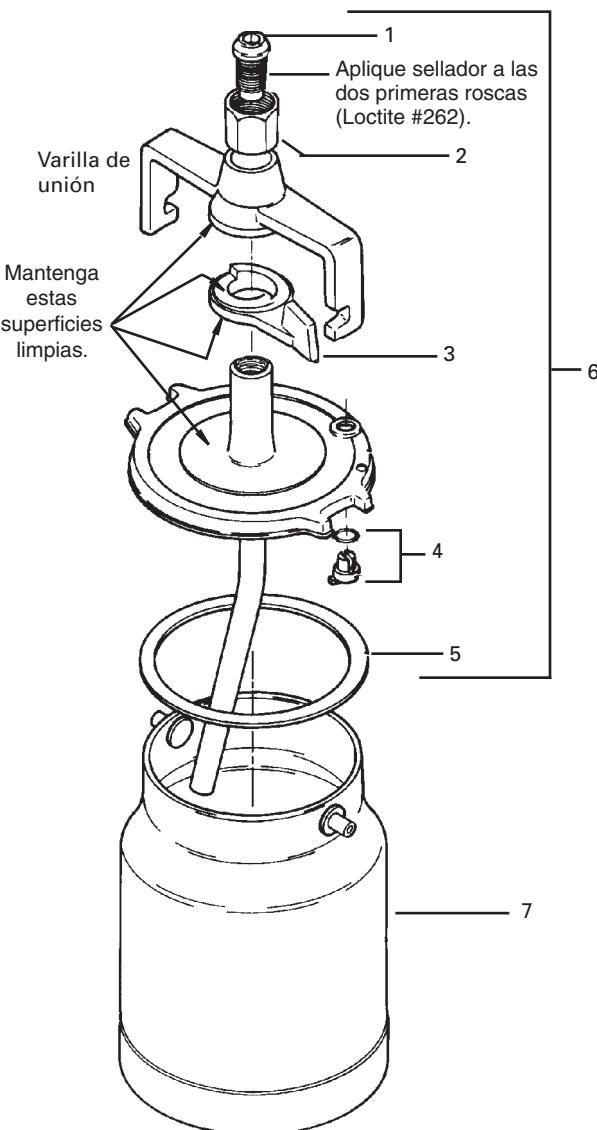

No. de Ref.	No. de repuestos	Descripción	Núm. de piezas requeridas
1*		Adaptador, 1/2" NPS (M)	1
2*		Tuerca, 3/8" NPS (F)	1
3*		Leva	1
4*	TGC-407-1-K3	Válvula libre de goteo y empaque (Kit de 3) **Empaque de la tapa**Tri Seal® (Kit de 5)	1
5*	TGC-9-K5	Unidad de la tapa (cuarto de galón)	1
6	TGC-404	Unidad de la taza de succión (Cuarto de galón)	1
7	KR-428-2	Unidad de la taza de succión (Revestimiento antiadherente, cuarto de galón)	1
	TLC-401		

* El Kit de reparación * KK-5007 incluye Núm. de Ref. 1-5. El kit de reparación contiene suficientes piezas para reparar una unidad completa.

El sufijo -K3 designa un kit de piezas múltiples. Ejemplo: TGC-407-1-K3 es un kit de 3 válvulas libres de goteo.

** Marca registrada de Tri-Seal International.

CONSIGNES DE SÉCURITÉ

Ce manuel renferme des renseignements importants que TOUS les utilisateurs doivent connaître et comprendre AVANT d'utiliser ce matériel. Cette information se rapporte à la SÉCURITÉ DE L'UTILISATEUR et à la PRÉVENTION DES PROBLÈMES DE FONCTIONNEMENT DU MATÉRIEL. Pour aider les utilisateurs à se retrouver dans cette information, nous avons recours aux termes suivants pour attirer l'attention sur certaines étiquettes du matériel et des sections du manuel. Porter une attention particulière à toute étiquette ou information qui est soulignée par l'un de ces termes :

MISE EN GARDE

Information importante pour attirer l'attention sur une situation pouvant occasionner des blessures graves ou même la mort.

AVERTISSEMENT

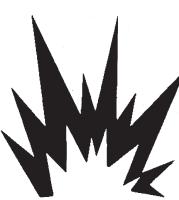

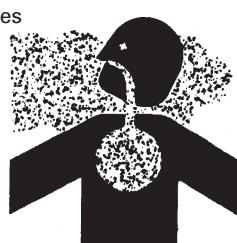

Information importante servant à prévenir les dommages au matériel

Remarque

Information à laquelle il faut porter une attention particulière.

MISE EN GARDE

**Les dangers suivants peuvent se produire durant l'usage normal de cet appareil.
Lire attentivement le tableau suivant.**

DANGER	CAUSE	MESURES DE PROTECTION
Feu 	Les solvants et les revêtements peuvent être hautement inflammables ou combustibles, surtout lorsqu'ils sont vaporisés.	Ne pas vaporiser près de flammes, veilleuses des cuisinières et appareils de chauffage, ou autres sources de chaleur. Il est essentiel de toujours fournir une ventilation adéquate. Toutes les utilisations industrielles doivent respecter les normes de l'OSHA.
Pulvérisation de solvants 	Durant le nettoyage et le rinçage du matériel, des solvants peuvent être évacués sous pression des conduites d'air et de liquide. Certains solvants peuvent occasionner des blessures ou de l'irritation aux yeux.	Porter des lunettes de protection.
Risque d'explosion : matériaux incompatibles 	Les solvants chlorés, par exemple : le trichloroéthane 1-1-1 et le dichlorométhane (parfois appelés chlorométhane), peuvent causer une réaction chimique avec l'aluminium contenu dans la plupart des pistolets pulvérisateurs, et leurs réservoirs, et provoquer un risque d'explosion. Les modèles TLC-555, TGC-545 et TGC-536 sont faits d'aluminium.	<ol style="list-style-type: none"> 1. Lire l'étiquette ou la fiche technique du produit à pulvériser. 2. N'utiliser aucun type de matériaux de revêtement contenant ces solvants. 3. Ne pas utiliser ces solvants pour nettoyer et rincer le matériel. 4. En cas de doute à savoir si un produit est compatible avec le matériel, communiquer avec le fournisseur du matériel.
Inhalation de substances toxiques 	Certains produits peuvent être nocifs lorsqu' inhalés, ou s'ils entrent en contact avec la peau.	<p>Suivre les recommandations de sécurité de la fiche technique fournie par le fabricant du produit de revêtement à pulvériser.</p> <p>Un système d'évacuation adéquat doit être prévu afin d'éviter l'accumulation de vapeurs toxiques.</p> <p>Utiliser un masque ou un respirateur lorsqu'il existe un risque d' inhale les produits pulvérisés. Le masque doit être compatible avec le produit utilisé et sa concentration. Le matériel de protection doit être recommandé par un expert en santé et sécurité au travail et approuvé par NIOSH.</p>

PROPOSITION 65 AVERTISSEMENT

AVERTISSEMENT: Ce produit contient des produits chimiques connus de l'état de Californie pour causer des malformations congénitales ou d'autres cancers et troubles de la reproduction.

Liste des pièces

N° de réf.	N° de pièce détachée	Description	Nb de pièces nécessaire
1*		Adaptateur, 1/2 po NPS (M)	1
2*		Écrou, 3/8 NPS (F)	1
3*		Came	1
4*	TGC-407-1-K3	Soupape et anneau d'étanchéité sans fuite (ensemble de 3)	1
5*	TGC-9-K5	** Anneau d'étanchéité de couvercle Tri Seal® (ensemble de 5)	1
6	TGC-404	Module du couvercle (946 ml [1 pinte])	1
